VIRTUAL INTELLIGENCE

The Next Massive Leap for Artificial Intelligence, Designed by You!

Our days are numbered…

At least in terms of controlling and interacting with artificial intelligence.

Standard interfaces including human interaction are being phased out rapidly. Alexa, Siri and countless other newly-emerging AI applications and computer chat bots are proof of this.

We're ditching keyboards and screens for a more natural, realistic and human form of interaction… **AND the technology is starting to interact back as well!**

AI is a booming sector with billions of dollars being pumped into companies. Industry leaders are behind a new horizon of computing - highly advanced AI systems and huge improvements to our everyday lives.

However, despite the impressive progress, nearly every one of these applications still relies on uninspiring hardware, 2D text chat, voice recognition or other flat 2D interfaces..

Well, not anymore, Virtual Presence's latest application - **Virtual Intelligence** - offers fully 3D life-like holographic representations for any AI algorithm. Rather than a floating voice coming from a device, your AI program can be in front of you in whatever form Virtual Intelligence has been configured as.

You could design this 3D avatar to be your partner, your best friend, another you, a celebrity or any virtual representation of an object or person. For example, Alexa could be a miniature woman that speaks to you face-to-face.

Available in any size and form, Virtual Intelligence holographic personas are now possible anywhere!

- Virtual butlers in every hotel room & smart home
- Personalised digital assistants in every workplace
- Your Personal Doctor in your pocket 24 x 7
- Out in the streets wherever AI benefits society – transportation, hospitality, retail, government, sport etc.

The list is never-ending and AI reaches its full potential once we no longer think "I must ask this computer to do this task." With Virtual Intelligence sat in front of you, ready to answer your questions and do your bidding, that outcome is a reality NOW.

We make Artificial Intelligence look good!

Get in touch now and define what your Virtual Intelligence persona looks like and if you're an AI developer, we want to talk to you…
